## Objective

---

Seeking to advance my career to the next level where I can lead and collaborate with teams across the board for complete product lifecycle. I am eager to join a team of professionals who take pride in their work and bring their best to the workplace, and the users of their products, everyday.

## Experience

---

➤ **Synergistics, DHA Lahore**  
**Sr. Software Engineer**

**(Aug 2015 – Date)**

- Inspecting requirements, defining scope and leading development from concept to complete product
- Development of multi-lingual applications for UAE market
- Providing technical as well as business advice to the directors, taking ownership of the products and helping the clients to maximize ROI

### Sayarti – My Car UAE

<https://itunes.apple.com/pk/app/sayarti-my-car-uae/id1040521346?mt=8>

A handy application for the drivers in United Arab Emirates area. It provides information about prices for various fuel types as well as their historic chart. Users can locate nearby petrol pumps, pay for parking, request a tire change, emergency services contacts and much more.

The users can request quotes for insurance for their vehicles, review quotes from multiple vendors and buy insurance policy, all within the app. There is also a module for classified listing for vehicle number plates.

### **My Role:**

Complete overhaul of the application from visual design to Swift as a programming language. Addition of Insurance, Plates Trading and HUD modules along with several ongoing updates.

### **Technologies:**

Checkout Payment Gateway, REST Services, Core Data, Auto Layout, Location Services

## **Soghan – Camel Marketplace**

<https://itunes.apple.com/ae/app/soghan-swghan/id1051682526?mt=8>

A mobile-first marketplace for camel owners in UAE. The application allows creating a portfolio of camels, listing them in marketplace, allowing the users to contact sellers.

It also includes various race videos, information about events happening in the camel industry and updates from social media handles like twitter.

### **My Role:**

Complete product development lifecycle management, from inception through design, development, product delivery and maintenance support.

### **Technologies:**

Multi-language support, iOS 9, Web Services, Multipart Forms, Youtube & Twitter API integration

## **Ajaar – Tenancy Contract Generator**

Yet to be released – Screenshots @ <http://bit.ly/1RirvRc>

A business class application that allows the real estate owners in the UAE area to manage their portfolio efficiently from their smartphones.

Users can enter details of their multiple properties, their prospective tenants, choose from a comprehensive list of optional terms along with standard UAE rental law requirements and generate a contract, all from this simple mobile application.

This does not only removes the role of middleman/agencies while letting one's properties but also lowers the cost of rental agreements dramatically.

### **My Role:**

From concept to a complete product, I designed, developed and tested the application with one more member of the team. This was the first project where I started using Swift along with Objective C in the codebase.

### **Technologies:**

Checkout Payment Gateway Integration, Auto- Layout, Multi-language support, Swift, Web Services

## **My Gold Tracker**

<https://itunes.apple.com/au/app/personal-goldtracker/id714110397?mt=8>

## **Paid Up**

<https://itunes.apple.com/ph/app/paidup-phil/id1053281996?mt=8>

## **Wajibati – Prayer Times & Qibla Compass**

<https://itunes.apple.com/pk/app/wajibati-prayer-times-qibla/id1008701689?mt=8>

## **Bookswap Edu**

<https://itunes.apple.com/pk/app/bookswap-edu/id1078927825?mt=8>

### ➤ **Horizon Technologies, Lahore Software Engineer**

**(Sep 2014 – Aug 2015)**

- Maintenance and addition of features in existing client applications.
- Development of simple games in Cocos2d & LibgdX frameworks
- Design and implementation of cloud backend services like Parse for mobile applications

## **My Check Register**

<https://itunes.apple.com/pk/app/my-check-register/id566812758>

A simple finance utility application that helps keep track of expenses and recurring payments in multiple accounts. The application is developed for both iPhone & iPad and data synchronization is done via web services which are enabled through an in-app purchase.

### **My Role:**

Features Addition, Bug Fixing, Backend Overhaul, Revenue Growth

### **Technologies:**

XML, SOAP Services, In-App Purchases, PHP

## **Go Promptu**

<https://itunes.apple.com/us/app/gopromptu/id985088604>

A utility application to find places to go and to eat when you are out with your friends. It fetches its data from popular services like Yelp, Groupon etc. and shows it on a map for convenient user view

### **My Role:**

Bug Fixes, Middleware API Incorporation for Groupon Batch Processing

## **Swipe 2 Match**

<https://itunes.apple.com/us/app/swipe2match/id982908738?mt=8>

A simple word catching game developed in Cocos 2d-Swift. Game play involves catching right words in a category like Countries, Fruits and Presidents as they move from bottom to top of the screen before disappearing.

### **My Role:**

Requirement Analysis, Complete design, development, In-Apps, Hand over to client with source code and assets. I learnt Cocos-2dSwift on the go for this project.

### **Technologies:**

XML, Cocos2d-Swift, Google Ads, In-App Purchases

- **Flexiant, Livingston, United Kingdom** (July 2012 – June 2013)  
**Java Developer**
  - Worked on their proprietary cloud orchestration software backend.
  - Scaled the system from single point server to multi-instance cluster
  - Contributed in developing new features of the platform on API stack.
- **Freelance Flex/AIR Developer** (Dec 10 – Aug 12)
